

CLAIMS

What is claimed:

1. An isolated polynucleotide comprising:

(a) a nucleotide sequence encoding a polypeptide having pantothenate synthetase activity, wherein the amino acid sequence of the polypeptide and the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13 have at least 85% sequence identity based on the Clustal alignment method, or

(b) the complement of the nucleotide sequence, wherein the complement and the nucleotide sequence contain the same number of nucleotides and are 100% complementary.

2. The polynucleotide of Claim 1, wherein the amino acid sequence of the polypeptide and the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13 have at least 90% sequence identity based on the Clustal alignment method.

3. The polynucleotide of Claim 1, wherein the amino acid sequence of the polypeptide and the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13 have at least 95% sequence identity based on the Clustal alignment method.

4. The polynucleotide of Claim 1, wherein the polypeptide comprises the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13.

5. The polynucleotide of Claim 1, wherein the nucleotide sequence comprises the nucleotide sequence of SEQ ID NO:1, 3, 5, 6, 8, 10, or 12.

6. A vector comprising the polynucleotide of Claim 1.

7. A recombinant DNA construct comprising the polynucleotide of Claim 1 operably linked to a regulatory sequence.

8. A method for transforming a cell comprising transforming a cell with the polynucleotide of Claim 1.

9. A cell comprising the recombinant DNA construct of Claim 7.

10. A method for producing a plant comprising transforming a plant cell with the polynucleotide of Claim 1 and regenerating a plant from the transformed plant cell.

11. A plant comprising the recombinant DNA construct of Claim 7.

12. A seed comprising the recombinant DNA construct of Claim 7.

13. An isolated polynucleotide comprising a first nucleotide sequence, wherein the first nucleotide sequence contains at least 30 nucleotides, and wherein the first nucleotide sequence is comprised by another polynucleotide, wherein the other polynucleotide includes:

(a) a second nucleotide sequence, wherein the second nucleotide sequence encodes a polypeptide having pantothenate synthetase

activity, wherein the amino acid sequence of the polypeptide and the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13 have at least 85% sequence identity based on the Clustal alignment method, or

- 5           (b) the complement of the second nucleotide sequence, wherein the complement and the second nucleotide sequence contain the same number of nucleotides and are 100% complementary.

10           14. An isolated polypeptide having pantothenate synthetase activity, wherein the amino acid sequence of the polypeptide and the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13 have at least 85% sequence identity based on the Clustal alignment method.

15           15. The polypeptide of Claim 14, wherein the amino acid sequence of the polypeptide and the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13 have at least 90% sequence identity based on the Clustal alignment method.

15           16. The polypeptide of Claim 14, wherein the amino acid sequence of the polypeptide and the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13 have at least 95% sequence identity based on the Clustal alignment method.

20           17. The polypeptide of Claim 14, wherein the amino acid sequence of the polypeptide comprises the amino acid sequence of SEQ ID NO:2, 4, 7, 9, 11, or 13.

20           18. A method for isolating a polypeptide encoded by the polynucleotide of Claim 1 comprising isolating the polypeptide from a cell transformed with the polynucleotide.

25           19. A method for evaluating at least one compound for its ability to inhibit pantothenate synthetase activity, comprising the steps of:

- 25           (a) transforming a host cell with the recombinant DNA construct of Claim 7;
- 30           (b) growing the transformed host cell under conditions that are suitable for expression of the recombinant DNA construct wherein expression of the recombinant DNA construct results in production of a pantothenate synthetase;
- 30           (c) optionally purifying the pantothenate synthetase expressed by the transformed host cell;
- 35           (d) treating the pantothenate synthetase with a compound to be tested; and
- 35           (e) comparing the activity of the pantothenate synthetase that has been treated with a test compound to the activity of an untreated pantothenate synthetase,

thereby evaluating at least one compound for its ability to inhibit pantothenate synthetase activity.
